

I. ATLAS USER PROGRAM

E. F. Moore

During the Fiscal Year 2003, ATLAS hosted strong “campaigns” involving radioactive beams, the CPT, the super-heavy element program, as well the AMS program. In addition, Gammasphere returned to ATLAS and became operational in March 2003. Many of the experimental programs were driven by outside Users, and in all programs, there was considerable outside User involvement. Over 95% of all experiments performed in Fiscal Year 2003 included one or more outside Users and roughly 50% of the approved experiments had an outside User as the Principal Investigator. Frank Moore continued to be available in a user liaison capacity to handle the scheduling of ATLAS experiments, provide assistance in experiment proposal submission matters, and help facilitate the effective performance of research at ATLAS by outside scientists. In addition, a large portion of the Heavy-Ion in-house scientific staff and members of the technical support staff spent time in experiment setup, preparation and assistance for the many different experiments performed at ATLAS.

A total of 179 Users from 60 different institutions were present at ATLAS for experiments in Fiscal Year 2003. The pie chart below shows the distribution of the institutions represented by ATLAS Users and the number of Users of each type. Of the 50 Users from U.S. National Laboratories, 32 are from Argonne (27 from the Physics Division, 5 from other divisions). There were 51 students at ATLAS for experiments this Fiscal Year, of which 11 were based at Argonne long-term. The names and institutions of all outside Users who were present at ATLAS in Fiscal Year 2003 are listed below in section (b).

The Program Advisory Committee met twice during the Fiscal Year 2003, on February 7-8, 2003 and September 19-20, 2003 to recommend experiments for beam time allocation at ATLAS. In Fiscal Year 2003 the Program Advisory Committee members were:

The PAC reviewed 54 proposals for 339 days of requested running time at the February meeting, and 50 proposals for 294 days at the September meeting. Due to the reduction of available beam time with 5 day/week operation for the first half of the FY and the large demand for Gammasphere beam time, the PAC was asked to prioritize experiments into two categories; those that must be run at any cost (*Priority I*), and those that should be granted beam time if at all possible (*Priority II*). Of the submitted proposals for the two meetings, the Program Advisory Committee recommended Priority I acceptance of 57 proposals for a total of 289 days of running time, and Priority II acceptance of 9 proposals for 55 additional days of beam time.

The fall meeting of the American Physical Society, Division of Nuclear Physics was held in Tucson, AZ, from October 29-November 1, 2003. The US national nuclear laboratories with low energy heavy ion facilities; ATLAS at Argonne, HRIBF at Oak Ridge, and the NSCL at Michigan States University held a joint User Meeting. In addition, the Gammasphere and RIA User groups meetings were also held during the same session. The Chair of the ATLAS User Group Executive Committee, Prof. Alan Wuosmaa (W. Michigan Univ.) introduced the ATLAS user program, and Frank Moore, Zheng-Tien Lu, and Alan Wuosmaa presented an overview of the ATLAS facility and some elements of the current physics program. Mike Carpenter discussed the status of Gammasphere at ATLAS during the Gammasphere Users group session. There were approximately 100 scientists in attendance at the meeting.

In Fiscal Year 2003 the ATLAS Executive Committee consisted of Alan Wuosmaa (Western Michigan University) as Chairperson, Jolie Cizewski (Rutgers University), Susan Fischer (De Paul University), and Walter Reviol (Washington University).
